Question 1  
 Incorrect  
 Noté sur 1,00

Given a database with (at least) a table *customers* as shown below, write an SQL query that returns the name, city and grade of all customers who live in London or Paris, in ascending order of name.

First 5 rows of *customers* table, ordered by id

| id   | name          | city       | grade | salesperson_id |
|------|---------------|------------|-------|----------------|
| 3001 | Brad Guzan    | London     | 100   | 5005           |
| 3002 | Nick Rimani   | New York   | 100   | 5001           |
| 3003 | Jozy Altidore | Moscow     | 200   | 5007           |
| 3004 | Fabian Joh    | Paris      | 300   | 5006           |
| 3005 | Graham Zus    | California | 200   | 5002           |

Par exemple:

| Test                        | Résultat   |       |      |       |            |        |     |            |       |     |            |        |     |
|-----------------------------|--|-------|------|-------|------------|--------|-----|------------|-------|-----|------------|--------|-----|
| -- Testing with original db | <table border="1"> <thead> <tr> <th>name</th> <th>city</th> <th>grade</th> </tr> </thead> <tbody> <tr> <td>Brad Guzan</td> <td>London</td> <td>100</td> </tr> <tr> <td>Fabian Joh</td> <td>Paris</td> <td>300</td> </tr> <tr> <td>Julian Gre</td> <td>London</td> <td>300</td> </tr> </tbody> </table> | name  | city | grade | Brad Guzan | London | 100 | Fabian Joh | Paris | 300 | Julian Gre | London | 300 |
| name                        | city   | grade |      |       |            |        |     |            |       |     |            |        |     |
| Brad Guzan                  | London   | 100   |      |       |            |        |     |            |       |     |            |        |     |
| Fabian Joh                  | Paris  | 300   |      |       |            |        |     |            |       |     |            |        |     |
| Julian Gre                  | London   | 300   |      |       |            |        |     |            |       |     |            |        |     |

Réponse : (régime de pénalités: 10, 20, ... %)

```

1 | select name, city, grade
2 | from customers
3 | where city = 'London' or city = 'Paris'
4 | order by
    
```
